Why choose a family doctor for your pregnancy care?

A family doctor has been trained to care for all members of a family, at every stage of life. So even after your baby is born, the family doctor who supported you through your pregnancy and delivery can continue to be the primary doctor for you and your new baby as well as other members of your family.

Why choose one of our doctors?

Experience: At Allina Medical Clinic – Northfield, our family doctors have years of experience caring for patients through every stage of pregnancy, labor, and delivery.

Availability: Our family physicians are always “on call” for their patients’ deliveries. So when it comes time for your labor and delivery it is very likely that your own doctor will be there for you and your baby. We also have extended hours for the urgent care needs of you and your family.

Quality and Continuity: At Allina Medical Clinic-Northfield, our family doctors work with a team of trained professionals to make sure that you and your baby receive the highest-quality care. You’ll deliver your baby at Northfield Hospital, where we partner with the Women’s Health Clinic for obstetric emergencies and Caesarean sections. We also work closely with perinatal specialists at Abbott Northwestern Hospital who offer specialized perinatal and neonatal care to women with high-risk pregnancies.
