

About this Research Study

Researchers at the Courage Kenny Rehabilitation Institute are studying how people with continuing symptoms after a concussion are able to perform thinking and turning activities at the same time (dual-task) to help medical professionals know when it is safe for athletes to return to sport or US Military Service Members to return to duty. This study is being funded by the US Department of Defense.

If you decide to take part in this research study, you would:

- ♦ **Attend one study session at the Courage Kenny Research Center, located at Abbott Northwestern Hospital.**
- ♦ **Receive up to \$75 in gift cards in appreciation for your time and contribution to this research.**

“Objective dual-task turning measures for return-to-duty assessments”

allinahealth.org/ckresearch

Seeking Active, Healthy Volunteers

for a research study about performing thinking and turning activities at the same time

This study might be a good fit for you if you:

- ✓ Are 18-50 years old

AND

- ✓ Have never had a concussion or had a concussion more than 7 years ago but have no continuing symptoms

OR

- ✓ **HAVE** had a concussion 3 weeks to 3 years ago with ongoing symptoms
