Considering Your Childbirth Options After a Cesarean

Vaginal Birth After Cesarean (VBAC) or Planned Cesarean Birth
Planning for Childbirth After a Cesarean Birth

If you have already had a Cesarean birth, you have two choices about how to give birth again:
- vaginal birth after Cesarean (VBAC)
- planned Cesarean delivery.

**VBAC**
A VBAC is when you have a vaginal birth after you have already had a Cesarean birth. This decision will be one that you and your health care provider will make together.

Among women delivering babies in Allina Health hospitals, 4 out of 5 have successfully had a VBAC.

**Guidelines for VBAC**
These are the guidelines for being able to have a VBAC, according to the American College of Obstetricians and Gynecologists (ACOG):
- you have had 1 or 2 previous Cesareans
- you have not had previous uterine surgery
- your previous uterine scar has not ruptured
- the size of your pelvis is wide enough to attempt a vaginal birth and you have not had any pelvic problems
- you have no other restrictions.

You should give birth in a hospital setting so the surgeon, nurses and an anesthesiologist are immediately available in case an emergency Cesarean birth is needed.

**Pain control**
You have options to control pain during vaginal birth. The most common option is a labor epidural.

Your health care provider will insert a small catheter (thin plastic tube) into your lower back. The tip of the catheter rests in the area just outside the spinal cord. This area is called the epidural space. Medicines to control labor pain are given through the catheter.

Your health care provider will explain the benefits and risks of a labor epidural. He or she can explain other pain control options that are available.

**Your feelings**
You may have mixed or negative feelings about giving birth vaginally.

You may be afraid to attempt labor, not knowing what to expect. You may favor a Cesarean birth because you know what to expect. If your last birth started with labor and ended with a Cesarean birth, you may not want to go through labor again.

Remember, each pregnancy and labor is different. In deciding if a VBAC is right for you, your health care provider will take your specific health into account.
You may have a planned Cesarean birth. This means you and your health care provider know before your labor begins this is the way your baby will be born.

A Cesarean birth might be planned if:

- you are at least 39 weeks into your pregnancy
- you have had a Cesarean birth
- you have had complications in a previous birth
- your baby is breech (your baby’s buttocks, feet or both are closest to the cervix)
- you have placenta previa (the placenta is covering some or all of the cervix)
- you have other risk factors that prevent you from giving birth vaginally.

In a Cesarean birth, your baby is born through an incision (surgical cut) in your lower abdomen. The surgery takes about 1 hour. Your baby is born within minutes after the surgery begins. The rest of the time is needed to remove the placenta and repair the incisions.

You can expect to be in a recovery area for about 90 minutes after delivery. If you and your baby are doing well, your baby will stay with you. Only your support person and baby can be in the room with you.

Make plans for your support person to stay with you for 24 to 48 hours after your surgery to help care for your baby.

Other members of your care circle (family members, friends or others close to you) are welcome to visit you and your baby after you are transferred to your room.

Most families want to stay together after the birth. Your baby will stay with you at all times unless you or your baby needs special care or testing, or you want your baby to visit the nursery.

Your health care team will offer education and support as you and your partner learn to care for your baby.

<thead>
<tr>
<th>Surgical risks</th>
<th>VBAC</th>
<th>Planned Cesarean Birth</th>
</tr>
</thead>
</table>
| — Are there any general risks after delivery? | ■ There is an increased risk of uterine rupture, which is a tear or opening in the uterus. This happens in fewer than 1 out of 100 VBACs.  
■ There is no guarantee a VBAC will work, which can result in a Cesarean birth.  
■ Side effects to you may include bleeding and infection.  
■ Side effects to your baby may include infection, birth trauma or brain injury. | ■ You may have damage to the bladder, bowel or ureters (tubes that bring urine from the kidney to the bladder).  
■ You will have a scar on your belly from the surgery.  
■ Side effects to you may include bleeding, wound infection and possible reaction to anesthesia.  
■ Side effects to your baby may include infection, birth trauma or brain injury. |
| — Are there any side effects for me or my baby after delivery? | ■ You will have a better chance of vaginal birth in future pregnancies. |

| Future pregnancy | You will have a lower chance of having a vaginal birth in future pregnancies. |

Questions for Your Health Care Provider

1. Is a VBAC a safe option for me and my baby?
2. What is my risk of having a uterine rupture during a VBAC?
3. Can I attempt a VBAC if my pregnancy continues beyond my due date?
4. Will I be able to use medicine (oxytocin or Pitocin®) to help my uterus contract during a VBAC?
5. When and how will we know if the VBAC is not successful and a Cesarean is needed?
6. If I need a Cesarean birth, is this hospital equipped to be able to handle it?
7. How will having a VBAC or Cesarean birth affect my risk during future pregnancies?
8. When do I need to make my decision?
9. What Allina Health hospitals offer VBAC?
10. Will my obstetrician (childbirth specialist) be at the hospital for my VBAC?
11. What is the next step for me?
Next Steps (continued)

Insurance Coverage
Health care benefits change and differ from plan to plan and provider to provider. It is important for you to understand your health care benefits before your delivery.

Please call your insurance provider and find out exactly what is and isn’t covered under your plan, and how much you have to pay yourself. Look for the telephone number on your membership card.

Check with your insurance provider if you have any questions about your coverage.

Allina Health Account

Sign up for an Allina Health account online to get:
- better communication with your clinic, hospital and provider
- faster answers
- online access to you and your loved one’s health information anytime.

With your account, you can:
- read visit notes and follow-up instructions
- view and pay bills
- refill a prescription
- view immunizations and medicines
- set and track health goals
- receive lab results sooner
- do an online visit for common conditions
- manage another person’s care
- write a health care directive
- email your care team*
- schedule appointments*.

Sign up for a secure account online at allinahealth.org. Your account is a free service of Allina Health.

*Availability varies by location. Ask your clinic or hospital if this service is available.
