

Placenta accreta spectrum center of excellence

Placenta Accreta Spectrum Disorders (PASDs) are serious pregnancy complications in which the placenta grows deeply into the wall of the uterus and is unable to detach after childbirth. Also known as placenta “accreta”, “increta” or “percreta” depending on the severity of the condition.

The risk for developing a PASD increases with each C-section or uterine surgery. These disorders put the mother at risk of severe blood loss and other complications. The rates of maternal death, transfusion, prolonged hospital stay and hysterectomy are all increased for women with accreta, increta, or percreta.

PASD FACTS

1 in 272
pregnant women
experience PASDs¹

Only **1 in 4**
general obstetricians
referred patients with
suspected PASD to
centers of excellence²

2.5-3.0L
median blood loss
associated with 3 types
of PASD cases³

OUR VISION

To promote a healthy pregnancy with the best possible outcome for mom and baby

ABOUT

Minnesota Perinatal is about partnership, identification and management of complex pregnancies to ensure the best outcomes for moms and babies through advanced screening, improved diagnostics, collaborative multidisciplinary care and a dedicated team of highly trained perinatal specialists.

Our Impact

Specializing in high risk pregnancies
Consultation and pregnancy management
Partner with international pregnancy and cardiac disease research and registry
Evidence-based practice
Advanced ultrasound diagnostics

Our Partners

Children's MN Neonatology
Minneapolis Heart Institute
Children's Heart Clinic
Midwest Fetal Care Center
Obstetric Providers
Abbott Northwestern Intensivists

Our Programs

Placenta Accreta Spectrum Disorder program
Cardio Pregnancy program
OB ICU
Genetics
Fetal Cardiology
